# STOREFRONTS ONLINE FEATURES

New Features Update 02/16/09

1) The vast majority of quote requests submitted through Storefronts Online now return pricing to you in **just seconds** and are followed up with a quote sent to you via fax and/or email minutes later. These quotes are completely generated through Storefronts Online. If you would like someone in Technical sales to review your quote(s) prior to you submitting it to your customer, just contact us and we will be glad to review it for you.

2) You can now order your hardware right from Storefronts Online! Just click on the 'Order Hardware' button, verify your shipping information, and Storefronts Online will submit your quoted storefront as an order. Our Technical Sales staff will review your order and either release it to production or call you to discuss anything we might have found as questionable or unclear.

3) You can also add additional CRL products that you might need to complete your project. Just click on the 'Add Catalog Product' button, add the items you need, click on 'Save', and then 'Order Hardware', its that simple.

Order Qty	Calc. Qty	Product Name	Category	Option	Ac
4	4	4" Tapered Door Rail w/o Loc	Door Rail	DR4TBS12S (35-3/4")	Bru

Previous Feature Updates
01/02/2008

1) There are now expanded options in the **Customize Business Details** screen. This screen can be accessed by the "-01" user from the **Storefront List screen by going to Maintain / Administration / Site**. This feature now allows for the designation of multiple branch locations in a single database. For example, the "- 01" user may have their branch in Los Angeles, but the same company has a "- 02" user in Miami. Now the different log-ins can have their own address, phone, fax and E-mail on their printed pages.

2) Your company logo can appear on any of the printed reports. This feature also is activated in the **Customize Business Details** screen and the logo location is controlled Maintain / Reports. From here you can select which reports will show your logo as well as the position of the logo on the page.
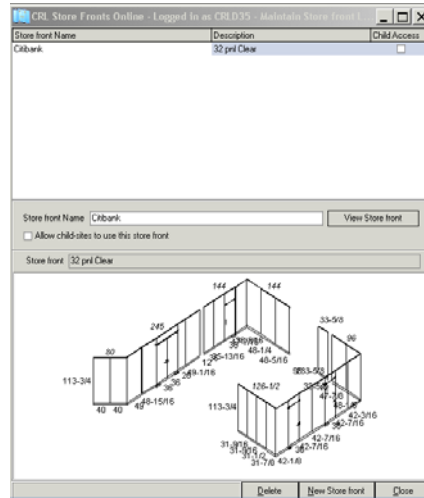

3) In the **Storefronts List** screen, you can search through your database of projects using several filters to make finding a particular project a snap.

4) Also new to the **Storefronts List** screen is the ability to 'clone', or copy, an existing project. You can either 'clone all' meaning the entire project, great for quoting multiple customers; or 'clone header' meaning the Storefront List screen information only, great for doing multiple entries for the same client.
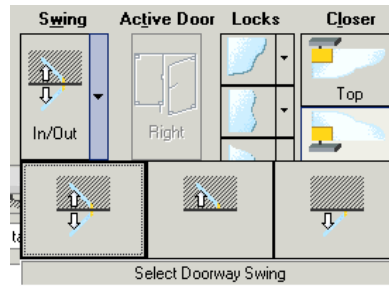

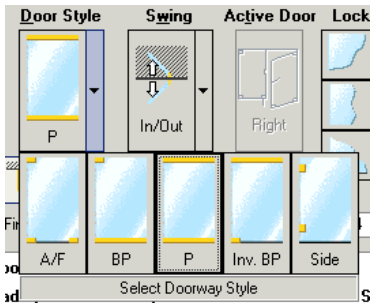

5) Perhaps the most powerful tool of all has also been added to the **Storefronts List** screen, the ability to request a quote of the storefronts you create. Just highlight the storefront you need a quote on, click on **'Quote/Order Hardware'** button to get to this screen, then click on **'Request Quote'** and follow the screen prompts and your request will be sent to us and should be back to you with 24 hours.
6) We have added a **'library'** feature that allows you to create and save storefronts as templates for future use, thus allowing you to be able to quote projects even faster. While on the **Storefront List** screen go to **Maintain / Storefront Library** to create and add a storefront to the library.

7) On the **Doorways** screen, you now have an expanded selection of door styles to choose from and the ability to specify handing of the doors, critical to certain types of hardware.

8) You can now view our web site offering of any of the parts you have selected on your storefront. Simply select the part you want to see in the **Doorways or Sidelites / Transoms** screen and then click on the **'Catalog'** button found in the 'Hardware Image' box. You will be automatically taken to that part on our web site. From there you can move around the site enjoying all the features that are typically available to you or return back to AGSFOL.

9) We have updated the Installation Sheet to now show a plan view of the storefront. We believe this to be a useful tool for you when communicating with your customers on more complex openings.
